Weltflug - The Gyroplane Dream: A true life story that lifts you into flight - literally. Take off to a fantastic world tour and fly through the most beautiful landscapes in Europe, Africa, Australia, New Zealand, the USA & South America. Imagine being a part of an 18-month airborne adventure that spans 5 continents. Feel the wind brushing against your face and exciting your skin. See yourself looking down from low altitudes, soaking in the awesome beauty of some of the planet's most fascinating destinations. And now, imagine that you are sharing this incredible adventure with your spouse - all from a 2-seated lightweight gyroplane! Impossible? That's just what everyone used to think. But Andreas and Melanie Stuetz were on a mission to live out their childhood dreams - and nothing was going to stop them... What is a gyroplane? First flown successfully in 1923, gyroplanes are types of rotorcrafts. Rotorcrafts utilize self-turning rotors to develop lift and motor-powered

propellers to generate thrust. Breathtaking and Courageous! With sheer wonderment, you'll glide into the atmosphere above historical Europe. In South America, you float above the stunning waterfalls of Iguacu. Across Africa, you experience a bird's-eye view of the captivating expanses of the Kalahari. Far away, you will drift slowly over the sights of New Zealand while further developing your sense of amazement about the world we live in. About the Adventurers:

Andreas G. Stuetz In the seventies, as a young boy in West Germany, Andreas dreamed of being an adventurer, an inventor and a successful entrepreneur. He always wanted to fly and was fascinated with the WDR cult TV puppet series Robbi, Tobbi and Fliewatuut. The Fliewatuut was a vehicle capable of flight, floatation and terrestrial travel. He was stricken then with need to fly. Life progressed. In 2000, he was awarded with the highly prestigious StartUp price by Angela Merkel. Andreas matured into the prosperous inventor and entrepreneur that he had envisioned - but something was missing. He still wanted to experience daring adventures in a Fliewatuut.

Melanie Stuetz Like Andreas, Melanie dreamed as a child in East Germany, the GDR, of limitless travel, ideally as a cosmonaut in space. On October 1989 she and her father crossed as refugees the green border to Prague (CZ) to enter the first refugee trains, which lead to the Western Part of Germany, where her Mom already waited after her last visit without return.

Twenty years later Melanie is closer than ever to her childhood dream. She was the first woman to pass the sport pilot licensing test for Xenon gyroplanes. After marrying, her and Andreas continued to plan for and train for the realization of their flight dreams. One day, while watching the James Bond movie, You Only Live Twice, they witnessed Sean Connery, as 007, performing a daring getaway scene. He soared away to safety, and to freedom, on a mini-helicopter - on a gyroplane! Let the adventure begin! Andreas and Melanie became licensed pilots and shortly thereafter launched their unified childhood dream of an unlimited world tour by the Fliewatuut-like gyroplane. It was a truly pioneering effort! Their astonishing adventure took eighteen months to complete and traversed five separate continents. This amazing book and accompanying video collection are the thrilling results of more than 3 years of work overall. Charity Terre des Hommes is an international charity dedicated to helping disadvantaged children. Melanie and Andreas share a deep sense of gratitude for the fortune that they have enjoyed. For that reason, a percentage of all proceeds from the sales of the book and DVD's is donated to Terre des Hommes. But money alone is not enough. It is a dream that drives the life of a person. And that is the reason why Andy & Mel also asked the children about their dreams. It is important that children do have dreams to find their way in life. To make childhood dreams come true This

journal is perfect for that awesome person in your life. This notebook is a great way to record goals, plans and jotting down notes. Show the world how much you enjoy writing and organizing your ideas. This journal has 100 pages and is sized conveniently at 6 x 9 inches. Special edition of the Federal Register, containing a codification of documents of general applicability and future effect ... with ancillaries. designed as a technical manual for applicants who are preparing for their private, commercial, or flight instructor pilot certificates with a helicopter or gyroplane class rating. Certificated flight instructors may find this handbook a valuable training aid, since detailed coverage of aerodynamics, flight controls, systems, performance, flight maneuvers, emergencies, and aeronautical decision making is included. Contents: Chapter 1?Introduction to the Helicopter; Chapter 2?General Aerodynamics; Chapter 3?Aerodynamics of Flight; Chapter 4?Helicopter Flight Controls; Chapter 5?Helicopter Systems; Chapter 6?Rotorcraft Flight Manual (Helicopter); Chapter 7?Weight and Balance; Chapter 8 Performance; Chapter 9?Basic Flight Maneuvers; Chapter 10?Advanced Maneuvers; Chapter 11?Helicopter Emergencies; Chapter 12?Attitude Instrument Flying; Chapter 13?Night Operations; Chapter 14?Aeronautical Decision Making; Chapter 15?Introduction to the Gyroplane; Chapter 16?Aerodynamics of the Gyroplane; Chapter 17?Gyroplane Flight Controls; Chapter 18?Gyroplane Systems; Chapter 19?Rotorcraft Flight Manual (Gyroplane); Chapter 20?Flight Operations; Chapter 21?Gyroplane Emergencies; Chapter 22?Gyroplane Aeronautical Decision Making; Glossary and index. The Helicopter Flying Handbook is designed as a technical manual for applicants who are preparing for their private, commercial, or flight instructor pilot certificates with a helicopter class rating.

Certificated flight instructors may find this handbook a valuable training aid, since detailed coverage of aerodynamics, flight controls, systems, performance, flight maneuvers, emergencies, and aeronautical decision-making is included. Topics such as weather, navigation, radio navigation and communications, use of flight information publications, and regulations are available in other Federal Aviation Administration (FAA) publications. A vital resource for pilots, instructors, and students, from the most trusted source of aeronautic information. The Rotorcraft Flying Handbook is designed as a technical manual for applicants who are preparing for their private, commercial, or flight instructor pilot certificates with a helicopter or gyroplane class rating.

Certificated flight instructors may find this handbook a valuable training aid, since detailed coverage of aerodynamics, flight controls, systems, performance, flight maneuvers, emergencies, and aeronautical decision making is included. Topics, such as weather, navigation, radio navigation and communications, use of flight information publications, and regulations are available in other Federal Aviation Administration (FAA) publications. This handbook conforms to pilot training and certification concepts established by the FAA. There are different ways of teaching, as well as performing flight procedures and maneuvers, and many variations in the explanations of aerodynamic

theories and principles. This handbook adopts a selective method and concept to flying helicopters and gyroplanes. The discussion and explanations reflect the most commonly used practices and principles. Occasionally, the word "must" or similar language is used where the desired action is deemed critical. The use of such language is not intended to add to, interpret, or relieve a duty imposed by Title 14 of the Code of Federal Regulations (14 CFR). This handbook is divided into two parts. The first part, chapters 1 through 14, covers helicopters, and the second part, chapters 15 through 22, covers gyroplanes. The glossary and index apply to both parts. It is essential for persons using this handbook to also become familiar with and apply the pertinent parts of 14 CFR and the Aeronautical Information Manual (AIM). Performance standards for demonstrating competence required for pilot certification are prescribed in the appropriate rotorcraft practical test standard. This handbook supersedes Advisory Circular (AC) 61-13B, Basic Helicopter Handbook, dated 1978. In addition, all or part of the information contained in the following advisory circulars are included in this handbook: AC 90-87, Helicopter Dynamic Rollover; AC 90-95, Unanticipated Right Yaw in Helicopters; AC 91-32B, Safety in and around Helicopters; and AC 91-42D, Hazards of Rotating Propeller and Helicopter Rotor Blades. Comprises of the minimum requirements and constitutes the basis for the
