Design + Environment Oct 05 2020 There is a huge scarcity of good, practical resources for designers and students interested in minimizing the environmental impacts of products. Design + Environment has been specifically written to address this paucity. The book first provides background information to help the reader understand how and why design for environment (DfE) has become so critical to design, with reference to some of the most influential writers, designers and companies in the field. Next, Design + Environment provides a step-by-step approach on how to approach DfE: to design a product that meets requirements for quality, cost, manufacturability and consumer appeal, while at the same time minimising environmental impacts. The first step in the process is to undertake an assessment of environmental impacts, using life-cycle assessment (LCA) or one of the many simpler tools available to help the designer. From then on, DfE becomes an integral part of the normal design process, including the development of concepts, design of prototypes, final design and development of marketing strategies. Environmental assessment tools and strategies to reduce environmental impacts, such as the selection of appropriate materials, are then discussed. Next, some of the links between environmental problems, such as global warming, ozone depletion, water and air pollution and the everyday products we consume are considered. In order to design products with minimal environmental impact, we need to have a basic understanding of these impacts and the interactions between them. The four subsequent chapters provide more detailed strategies and case studies for particular product groups: packaging, textiles, furniture, and electrical and electronic products. Guidelines are provided for each of the critical stages of a product's life, from the selection of raw materials through to strategies for recovery and recycling. Finally, Design + Environment takes a look at some of the emerging trends in DfE that are offering us the opportunity to make a more significant reduction in environmental impacts. Both the development of more sustainable materials and technologies and the growing interest in leasing rather than selling products are examined. Design + Environment is organized as a workbook rather than an academic text. It should be read once, and then used as a key reference source. This clear and informative book will prove to be invaluable to practising designers, to course directors and their students in need of a core teaching and reference text and to all those interested in learning about the tools and trends influencing green product design. The authors have all been involved in an innovative demonstration programme called "EcoReDesign", which was developed by the Centre for Design at RMIT University with funding from the Australian government. The Centre successfully collaborated with Australian companies to improve the environmental performance of their products by following DfE principles.

Environmental Law Jul 14 2021 This fundamental introduction to environmental law is designed to introduce those without any legal or special scientific training to the system through which the nation attempts to preserve and protect the different aspects of our environment. Environmental law and policy; air quality control; water quality control; toxic substance control; waste management and hazardous releases; energy; natural resources; and international environmental law. For anyone who is in business or anyone who is simply interested in environmental issues or who has a job where they have to understand environmental law.

Sense of Place and Sense of Planet Apr 30 2020 Sense of Place and Sense of Planet analyzes the relationship between the imagination of the global and the ethical commitment to the local in environmentalist thought and writing from the 1960s to the present. Part One critically examines the emphasis on local identities and communities in North American environmentalism by establishing conceptual connections between environmentalism and ecocriticism, on one hand, and theories of globalization, transnationalism and cosmopolitanism, on the other. It proposes the concept of "eco-cosmopolitanism" as a shorthand for envisioning these connections and the cultural and aesthetic forms into which they translate. Part Two focuses on conceptualizations of environmental danger and connects environmentalist and ecocritical thought with the interdisciplinary field of risk theory in the social sciences, arguing that environmental justice theory and ecocriticism stand to benefit from closer consideration of the theories of cosmopolitanism that have arisen in this field from the analysis of transnational communities at risk. Both parts of the book combine in-depth theoretical discussion with detailed analyses of novels, poems, films, computer software and installation artworks from the US and abroad that translate new connections between global, national and local forms of awareness into innovative aesthetic forms combining allegory, epic, and views of the planet as a whole with modernist and postmodernist strategies of fragmentation, montage, collage, and zooming.

The Global Interior Jan 20 2022 Megan Black argues that the U.S. Department of the Interior, known for managing domestic natural resources and operating public parks, constantly supports and projects American power abroad. In the guise of sharing expertise globally, Interior has helped the U.S. maintain key benefits of empire without the burden of playing the imperialist villain.

Environmental Policy and Politics May 24 2022 Covering global threats such as climate change, population growth, and loss of biodiversity, as well as national, state, and local problems of environmental pollution, energy use, and natural resource use and conservation, Environmental Policy and Politics provides a comprehensive overview of U.S. policy-making processes, the legislative and administrative settings for policy decisions, the role of interest groups and public opinion in environmental politics, and the public policies that result. It helps readers understand modern environmental policy and its implications, including the need for a comprehensive and integrated approach to problem solving.

Resilience, Development and Global Change Aug 22 2019 Resilience is currently infusing policy debates and public discourses, widely promoted as a normative goal in fields as diverse as the economy, national security, personal development and well-being. Resilience thinking provides a framework for understanding dynamics of complex, inter-connected social, ecological and economic systems. The book critically analyzes the multiple meanings and applications of resilience ideas in contemporary society and to suggests where, how and why resilience might cause us to re-think global change and development, and how this new approach might be operationalized. The book shows how current policy discourses on resilience promote business-as-usual rather than radical responses to change. But it argues that resilience can help understand and respond to the challenges of the contemporary age. These challenges are characterized by high uncertainty; globalized and interconnected systems; increasing disparities and limited choices. Resilience thinking can overturn orthodox approaches to international development dominated by modernization, aid dependency and a focus on economic growth and to global environmental change - characterized by technocratic approaches, market environmentalism and commoditization of ecosystem services. Resilience, Development and Global Change presents a sophisticated, theoretically informed synthesis of resilience thinking across disciplines. It applies resilience ideas specifically to international development and relates resilience to core theories in development and shows how a radical, resilience-based approach to development might transform responses to climate change, to the dilemmas of managing forests and ecosystems, and to rural and urban poverty in the developing world. The book provides fresh perspectives for scholars of international development, environmental studies and geography and add new dimensions for those studying broader fields of ecology and society.

Power Shift Nov 17 2021 Energy transitions are fundamental to achieving a zero-carbon economy. This book explains the urgently needed transition in energy systems from the perspective of the global political economy. It develops an historical, global, political and ecological account of key features of energy transitions: from their production and financing, to how they are governed and mobilised. Informed by direct engagement in projects of energy transition, the book provides an accessible account of the real-world dilemmas in accelerating transitions to a low carbon economy. As well as changes to technology, markets, institutions and behaviours, Power Shift shows that shifts in power relations between and within countries, and across social groups and political actors, are required if the world is to move onto a more sustainable path. Using contemporary and historical case studies to explore energy transitions, it will be of interest to students and researchers across disciplines, policymakers and activists.

Special Events Jan 08 2021 Recent years have seen dramatic changes to the events industry. The influence of social media and global communications technology, increased focus on environmental sustainability and social responsibility, and changes to the economic and cultural landscape have driven rapid expansion and increased competition. Special Events: Creating and Sustaining a New World for Celebration has been the event planner's essential guide for three decades, providing comprehensive coverage of the theory, concepts and practice of event management. The new Eighth Edition continues to be the definitive guide for creating, organizing, promoting, and managing special events of all kinds. Authors, Seungwon "Shawn" Lee and Joe Goldblatt, internationally-recognized leaders and educators in the industry, guide readers through all the aspects of professional event planning with their broad understanding of diverse cultures and business sectors. This definitive resource enables current and future event leaders to stretch the boundaries of the profession and meaningfully impact individuals, organizations, and cultures around the globe. Global case studies of high-profile events, such as the PyeongChang Winter Olympic Games and Norway's Constitution Day annual event, complement discussions of contemporary issues surrounding safety, security, and risk management. Each chapter includes "Ecologic," "Techview," and/or "Secureview," mini-case studies, a glossary of terms, plentiful charts, graphs, and illustrations, and links to additional online resources.

The Best That Money Can't Buy Jul 26 2022 FEW TECHNOLOGICAL ACHIEVEMENTS are as impressive as the ability to see our own planet from outer space. The beautiful sphere suspended against the black void of space makes plain the bond that the billions of us on Earth have in common. This global consciousness inspires space travellers who then provide emotional and spiritual observations. Their views from outer space awaken them to a grand realization that all who share our planet make up a single community. They think this viewpoint will help unite the nations of the world in order to build a peaceful future for the present generation and the ones that follow. Many poets, philosophers, and writers have criticized the artificial borders that separate people preoccupied with the notion of nationhood. Despite the visions and hopes of astronauts, poets, writers, and visionaries, the reality is that nations are continuously at war with one another, and poverty and hunger prevail in many places throughout the world, including the United States. So far, no astronaut arriving back on Earth with this new social consciousness has proposed to transcend the world's limitations with a world where no national boundaries exist. Each remains loyal to his/her particular nation-state, and doesn't venture beyond patriotism - "my country, right or wrong" - because doing so may risk their positions. Most problems we face in the world today are of our own making. We must accept that the future depends upon us. Interventions by mythical or divine characters in white robes descending from the clouds, or by visitors from other worlds, are illusions that cannot solve the problems of our modern world. The future of the world is our responsibility and depends upon decisions we make today. We are our own salvation or damnation. The shape and solutions of the future depend totally on the collective effort of all people working together.

Environmental Values Apr 22 2022 We live in a world confronted by mounting environmental problems; increasing global deforestation and desertification, loss of species diversity, pollution and global warming. In everyday life people mourn the loss of valued landscapes and urban spaces. Underlying these problems are conflicting priorities and values. Yet dominant approaches to policy-making seem ill-equipped to capture the various ways in which the environment matters to us. Environmental Values introduces readers to these issues by presenting, and then challenging, two dominant approaches to environmental decision-making, one from environmental economics, the other from environmental philosophy. The authors present a sustained case for questioning the underlying ethical theories of both of these traditions. They defend a pluralistic alternative rooted in the rich everyday relations of humans to the environments they inhabit, providing a path for integrating human needs with environmental protection through an understanding of the narrative and history of particular places. The book examines the implications of this approach for policy issues such as biodiversity conservation and sustainability. Written in a clear and accessible style for an interdisciplinary audience, this volume will be ideal for student use in environmental courses in geography, economics, philosophy, politics and sociology.

Environmental Policy Aug 27 2022 Authoritative and trusted, Environmental Policy once again brings together top scholars to evaluate the changes and continuities in American environmental policy since the late 1960s and their implications for the twenty-first century. Students will learn to decipher the underlying trends, institutional constraints, and policy dilemmas that shape today's environmental politics. The Tenth Edition examines how policy has changed within federal institutions and state and local governments, as well as how environmental governance affects private sector policies and practices. The book provides in-depth

examinations of public policy dilemmas including fracking, food production, urban sustainability, and the viability of using market solutions to address policy challenges. Students will also develop a deeper understanding of global issues such as climate change governance, the implications of the Paris Agreement, and the role of environmental policy in the developing world. Students walk away with a measured yet hopeful evaluation of the future challenges policymakers will confront as the American environmental movement continues to affect the political process.

Guide to Global Real Estate Investment Trusts May 12 2021 The global listed property sector has been characterized by a variety of noteworthy developments in recent times, the proliferation of real estate investment trust-type structures in countries around the world key among them. Despite an uncertain economic environment, REITs have proven their ability to promote institutional real estate investments in global financial markets. This highly practical book features a comprehensive analysis of both the legal and tax underpinnings of REIT-friendly legislation in a variety of the world's most significant jurisdictions. With regard to the legal framework, the structure and functioning of a REIT is carefully investigated and explained. In terms of tax issues, the book focuses on such key issues as: REIT formation, operation and liquidation; mergers, acquisitions and dispositions; as well as planning for public and private REIT offerings and re-securitizations. REITs are inherently complex and their interplay with tax treaties further compounds the complexity. This highly accessible yet authoritative work is the perfect decision-making tool for any professional looking for perspective and guidance on the challenges and opportunities REITs engender.

Global Marketing Management Jun 24 2022 The 7th Edition of Global Marketing Management prepares students to become effective managers overseeing global marketing activities in an increasingly competitive environment. The text's guiding principle, as laid out concisely and methodically by authors Kotabe and Helsen, is that the realities of international marketing are more "multilateral." Suitable for all business majors, the text encourages students to learn how marketing managers work across business functions for effective corporate performance on a global basis and achievement of overall corporate goals. Global Marketing Management brings timely coverage in various economic and financial as well as marketing issues that arise from the acutely recessionary market environment.

The Fourth Industrial Revolution Sep 03 2020 World-renowned economist Klaus Schwab, Founder and Executive Chairman of the World Economic Forum, explains that we have an opportunity to shape the fourth industrial revolution, which will fundamentally alter how we live and work. Schwab argues that this revolution is different in scale, scope and complexity from any that have come before. Characterized by a range of new technologies that are fusing the physical, digital and biological worlds, the developments are affecting all disciplines, economies, industries and governments, and even challenging ideas about what it means to be human. Artificial intelligence is already all around us, from supercomputers, drones and virtual assistants to 3D printing, DNA sequencing, smart thermostats, wearable sensors and microchips smaller than a grain of sand. But this is just the beginning: nanomaterials 200 times stronger than steel and a million times thinner than a strand of hair and the first transplant of a 3D printed liver are already in development. Imagine "smart factories" in which global systems of manufacturing are coordinated virtually, or implantable mobile phones made of biosynthetic materials. The fourth industrial revolution, says Schwab, is more significant, and its ramifications more profound, than in any prior period of human history. He outlines the key technologies driving this revolution and discusses the major impacts expected on government, business, civil society and individuals. Schwab also offers bold ideas on how to harness these changes and shape a better future—one in which technology empowers people rather than replaces them; progress serves society rather than disrupts it; and in which innovators respect moral and ethical boundaries rather than cross them. We all have the opportunity to contribute to developing new frameworks that advance progress.

Global Environmental Politics Oct 17 2021 "Global Environmental Politics has provided an accurate, up-to-date, and unbiased understanding of the world's most pressing environmental issues for over twenty-five years. The eighth edition continues this practice as it covers critical new developments in the field. Case studies on key issues such as climate change, toxic chemicals, and biodiversity detail the creation, expansion, and implementation of major environmental regimes and the continuing challenges they face. New material has been included on the Sustainable Development Goals, 2030 Agenda for Sustainable Development, Minamata Convention on Mercury, advancement of the Paris Climate Agreement, and recent developments related to global treaties on toxic chemicals, desertification, biological diversity, and more, completes this comprehensive introduction to contemporary international environmental politics"--

Global Environmental History Nov 05 2020 Global Environmental History introduces this rapidly developing field through a broad and thought-provoking range of expert contributions. Environmental history is a subject especially suited to global and transnational approaches and, over the course of the present generation, an increasing number of scholars have taken up the challenge that it presents. The collection begins with a series of chapters offering truly global visions; they range from reflections on the role of animals in environmental history to an overview of environmental change over the past ten millennia. Part Two switches to a sharper focus, featuring essays that characterize the distinctiveness of certain key regions such as China, Russia, West Africa, South Asia, Europe, and Latin America. The final part of the book examines different forms of modern environmentalism, ranging from the U.S. and its fascination with wilderness, to Japanese concern with human health, and on to Peru and India, where the environmental debate centres on access to resources. Global Environmental History will be an essential resource for students of Environmental History and Global History.

Citizen Participation in Global Environmental Governance Jan 26 2020 On one day in 2009, in thirty-eight countries around the world, 4,000 ordinary citizens gathered to discuss the future of climate policy. This project, 'WWViews', was the first-ever global democratic deliberation - an attempt to enable ordinary people to reach informed decisions on and impact the global policy process. This book - which analyzes the experiences and lessons from this ground-breaking event - marks the beginning of a new kind of democratic politics, providing practical lessons on how to increase the impact of global deliberation projects within the media and on official policy processes. The authors explore important themes for participatory approaches from the local to the global: the role of deliberation within global governance methodology and practice participant selection; policy impacts engaging the media how policy culture affects deliberation uptake capacity building and knowledge transfer process evaluation content and argumentation analysis gender, race and class aspects. The global aims of the 'WWViews project', along with the opportunity to evaluate the same process in different national and cultural contexts, makes this a hugely valuable and informative study for all those interested in democratic deliberation and environmental governance from the small to the international scale.

Global Environmental Institutions Mar 10 2021 There has been a concurrent growth in interest in the institutions that deal with global environmental issues. A vast number of international organizations address these matters; this volume provides an overview of the major global institutions attempting to protect the natural environment. It first considers the United Nations Environment Programme and the other entities within the United Nations that play important roles in global environmental governance. It then examines institutions clustered by issue area, introducing institutions that focus on protecting endangered species and biodiversity, those that govern the ocean environment, those focusing on the atmosphere, and a recent set of institutions that regulate the transboundary movement of hazardous substances. It concludes with current debates on financing international environmental action, gaining widespread participation by states, and the question of whether the institutional structure of global environmental governance can, and should, be fundamentally reformed. The volume as a whole focuses on: the underlying causes of global environmental problems the creation of global environmental institutions the effectiveness of action undertaken by these institutions. Written by an acknowledged expert in the field, *Global Environmental Institutions* is essential reading for students of environmental politics and international organizations.
