The Roman Way Oct 04 2020 Drawing on the greatest writers of its civilization, Hamilton vividly depicts the life and spirit of Rome. In this informal history of Roman civilization, Edith Hamilton vividly depicts the Roman life and spirit as they are revealed in the greatest writers of the time. Among these literary guides are Cicero, who left an incomparable collection of letters; Catullus, the quintessential poet of love; Horace, the chronicler of a cruel and materialistic Rome; and the Romantics Virgil, Livy, and Seneca. The story concludes with the stark contrast between high-minded Stoicism and the collapse of values witnessed by Tacitus and Juvenal. "No one in modern times has shown us more vividly . . . 'the grandeur that was Rome.' Filtering the golden essence from the mass of classical literature, she proved how applicable to

our daily lives are the humor and wisdom of more than 2,000 years ago.”— New York Times

Star Power: The Impact of Branded Celebrity [2 volumes] Jul 01 2020 Stars do have real power, but not all of them wield it wisely. This work explores how a variety of celebrities developed their brands and how celebrity can become a jumping-off point to entirely unrelated activities. • Connects artists to their frequent collaborators, giving readers the benefit of an expansive introduction that leads logically into an advanced discussion of each star • Documents how pioneering individuals such as Woody Allen and Clint Eastwood expand their professional activities, thereby setting the precedent for what is now commonplace: the performer as writer, director, producer, and brand • Covers a broad range of individuals, including Ezra Pound, Charlie Chaplin, Mario Puzo, Lady Gaga, Oprah Winfrey, Spike Lee, Fran Drescher, and even President Theodore Roosevelt

Handbook Of Unconventional Computing (In 2 Volumes) Jun 12 2021 Did you know that computation can be implemented with cytoskeleton networks, chemical reactions, liquid marbles, plants, polymers and dozens of other living and inanimate substrates? Do you know what is reversible computing or a DNA microscopy? Are you aware that randomness aids computation? Would you like to make logical circuits from enzymatic reactions? Have you ever tried to implement digital logic with Minecraft? Do you know that eroding sandstones can compute too? This volume reviews most of the key attempts in coming up with an alternative way of computation. In doing so, the authors show that we do not need computers to compute and we do not need computation to infer. It invites readers to rethink the computer and computing, and appeals to computer scientists, mathematicians, physicists and philosophers. The topics are presented in a lively and easily accessible manner and make for ideal supplementary reading across a broad range of subjects.

Catalogue of Bull's English and Foreign Library ... comprising a valuable collection of standard works and all the modern publications of general interest Mar 29 2020

The Cold War: Interpreting Conflict through Primary Documents [2 volumes] Mar 21 2022 This detailed two-volume set tells the story of the Cold War, the dominant international event of the second half of the 20th century, through a diverse selection of primary source documents. • Provides in-depth documentary coverage of all key aspects of the Cold War, helping readers understand the continued significance of the Cold War to the current world • Includes documents from all sides of the conflict, including many newly available materials from the Soviet bloc, Cuba, and China • Traces the origins of Cold War rivalry and

antagonism between the United States and the Soviet Union back to the Russian Revolution of 1917 • Offers detailed coverage of how the Cold War surfaced beyond Europe, especially in Asia and the Middle East

Hydroinformatics, Proceedings Of The 6th International Conference (In 2 Volumes, With Cd-rom)

Jan 07 2021 Hydroinformatics addresses cross-disciplinary issues ranging from technological and sociological to more general environmental concerns, including an ethical perspective. It covers the application of information technology in the widest sense to problems of the aquatic environment. This two-volume publication contains about 250 high quality papers contributed by authors from over 50 countries. The proceedings present many exciting new findings in the emerging subjects, as well as their applications, such as: data mining, data assimilation, artificial neural networks, fuzzy logic, genetic algorithms and genetic programming, chaos theory and support vector machines, geographic information systems and virtual imaging, decision support and management systems, Internet-based technologies. This book provides an excellent reference to researchers, graduate students, practitioners, and all those interested in the field of hydroinformatics.
